Company Profile

A leading life science plastic consumables manufacturer.

Wuxi NEST Biotechnology Co., Ltd. is a leading life science plastic consumables manufacturer located in Wuxi, Jiangsu, China, integrated with R&D production and sales, which was established in 2009. Our products have been exported to North America, Europe, Japan, Korea, India, and other countries, with an excellent reputation nationwide and abroad. Customers are located almost all over the world.

2011, NEST passed the standard of the quality management system of ISO 9001.

2014, NEST passed the standard of the quality management system of ISO 11137.

2016, NEST passed the standard of the quality management system of ISO 13485.

2020, NEST obtained the medical device production license.

In addition to these certifications, we also gained CE and FDA standards.

NEST Scientific Inc. (USA)

With the development of the business, we have established deep cooperation and built strong relationships with overseas customers in order to send the products to customers in North America more quickly. Nest Scientific Inc., a branch of Wuxi NEST Biotechnology Co., Ltd., was established in New Jersey, the USA in 2013. Composed by a professional team with rich experience in training and sales skills, NEST Scientific USA can provide professional training as well as great communication with customers in-depth in order to understand customers' demands better and quicker. In 2022, NEST is opening a new 48,000ft warehouse located in Phoenix, AZ. This new warehouse allows for more space to receive in and stock items as well as lower shipping costs for distributors on the west coast.

Your best choice for medical laboratory consumables.

NEST is dedicated to researching and developing innovative plastic consumables suitable for life sciences research and medical establishments. There are more than 600 plastic consumables that can be widely used for cell culture, molecular biology, immunoassays, liquid handling, and storage such as cell culture plates, Erlenmeyer flasks, BioFactory, pipette tips, etc. More than 100 medical plastic consumables and reagents can be used in molecular diagnosis and vaccination, such as disposable samplers, transport media, swabs, nucleic acid extraction kits, and disposable intranasal atomization devices. In order to provide a more comprehensive and convenient service, we work closely with our affiliated company Wuxi Tech-star Technology Co., Ltd. We also provide lab instruments such as centrifuges, metal baths, BioBank, etc.

Wuxi NEST Biotechnology Co., Ltd.

Quality Guaranteed Experienced team & a complete plastic consumables production line.

We have a complete plastic consumables production line. From mold-making to injection molding and sterilization, all the procedures are done efficiently in our own factory. Precision molds, high-quality raw material, and advanced equipment are used to produce and perform quality testing with strict and comprehensive rules to ensure our products meet the highest quality and performance standards expected by the hospitals, research institutions, and industrial, clinical laboratories that we supply.

- **Excellent mold-making ability.**

Our R&D team, with over 30 years of experience, works with high-quality mold-making equipment imported from Germany and professional mold analysis software that allows NEST to develop more precise molds.

- **Injection molding in Class 10,000 and Class 100,000 clean rooms, with strict quality control.**

16,146 ft² Class 10,000 cleanroom and 48,438 ft² Class 100,000 cleanroom, all-electric high-speed injection molding machines imported from Japan, the raw material which meets USP Class VI requirements. Production and quality control are performed strictly in accordance with the corresponding SOP.

- **Sterilization by electronic beam irradiation.**

The Rhodotron TT200 electron accelerator was imported from the IBA company, a world leader in the E-Beam sterilization industry in Belgium. The sterilization process has been certified by the ISO 11137 quality system. Compared with sterilization by cobalt 60 or ethylene oxide sterilization, sterilization by electronic beam irradiation is more efficient and safer. It requires less time and will not produce any chemical residue.

Cell Culture Plates

Excellent bottom uniformity

Special lid design ensures low evaporation

NEST cell culture plates have round edges for better handling. Low profile, low-evaporation lid design assure uniform growth. Tissue treated and non-treated are both available. Non-treated growth surface is more hydrophobic than tissue culture surface and are similar to the surface of a bacteriological Petri dish. Small feet on the bottom corners of each plate eliminate scraping of the microscope lens.

Features

- Sterilized by E-beam, SAL=10⁻⁶.
- High clarity, 100% virgin polystyrene.
- "TC" refers to vacuum plasma tissue culture treatment.
- Clear lot number for batch traceability.
- Markings of well coordinates available for 12, 24, 48 and 384 well plates.
- Non-Pyrogenic, DNase/Rnase free.

Products Name	Cell Growth Area (cm ²)	Recommended Medium Volume (mL)
6 Well Cell Culture Plate	9.5	1.9-2.9
12 Well Cell Culture Plate	3.6	0.76-1.14

48 Well Cell Culture Plate	0.88	0.19-0.285
96 Well Cell Culture Plate	0.32	0.1-0.2
384 Well Cell Culture Plate	0.11	0.025-0.05

Cell Culture Plates

NEW PRODUCT

Feature of Cell Culture Plates, with Black/White Wall and Clear Bottom

NEST cell culture plates, with black/white wall and clear bottom have been designed for high content screening (HCS) assays in drug development and related areas. It is also suitable for homogeneous assays employing fluorescence intensity, FRET and TR-FRET where measurements are bottom-read.

Black wall are suited for fluorescent assays using either top or bottom detection microplate readers. Reduce cross influence.

White wall are suited for luminescent assays using either top or bottom detection microplate readers.

NEW PRODUCT

Feature of Low Evap EDGE Plates

Grooves are designed at the edge of the culture plate to avoid the edge effect to the greatest extent and to ensure that the cells maintain their optimal state during cell culture.

Product Description:

Cell and tissue culture technologies have an increasing importance in the fields of basic and applied life science. New culture vessels and new surfaces for cell adsorption are continuously emerging, in order to simulate the internal environment as much as possible for culture of some special cell lines. Logically, using permeable supports with a microporous membrane becomes the basic method for culturing these cells. Permeable supports may effectively improve the culture of polar cells, because these supports allow cells to secrete on and absorb molecules from their basal and apical surfaces to metabolize in a more natural way, as well as to stimulate the in vivo environment to the maximum extent for culturing of some special cell lines.

Cell Culture Inserts

Features

- Sterilized by E-beam, SAL=10⁻⁶.
- Cell culture plates are made of high clarity, 100% virgin polystyrene.
- Vacuum Plasma tissue culture treatment.
- Clear lot number for batch traceability.
- Non-Pyrogenic, DNase/Rnase free.
- Innovative edge design for convenient sample loading.
- A rich selection of matching plates: 6-well, 12-well, 24-well.
- Low protein binding to ensure accurate results.
- Passed the USP VI toxicity test.
- Compatible with most solvents used for fixing and staining.

NEW PRODUCT

Glass Bottom Cell Culture Dishes / Plates

NEST glass bottom series are applied in confocal microscope, high resolution microscope, differential interference contrast microscope, polarized light microscope and phase contrast microscope for cell observation.

Features

- Can be used for live cell observation.
- Special bottom design for easy grip.
- Round cover glass insert for good appearance.
- Medical adhesive glue to guarantee non-cytotoxicity.
- Sterilized by E-beam, SAL=10⁻⁶.
- Made of high clarity, 100% virgin polystyrene and high clarity glass as bottoms.
- High quality cover glass of standard thickness.

Unit: mm

- ① Φ 15 Glass Bottom Dish
- ② Φ 20 Glass Bottom Dish
- ③ 24 Well Glass Bottom Plate
- ④ 6 Well Glass Bottom Plate

100 mm Dishes with Griping Ring

Vent points for Gas Exchange

Sterilized Packing

NEST cell culture dishes are ideal for all types of culturing where microscopic examination is required. Numeric indicators on the bottom of each plate allow users to identify the location of cells.

Features

- High clarity, 100% virgin polystyrene.
- Flat transparent surface for distortion-free observation.
- Vacuum plasma TC treatment, excellent cell adherence.
- Stackable for easy storage and handling.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.

Cell Culture Chamber Slides

NEST Cell Culture Chamber Slides are designed for various cell-based experiments and are also useful for virus, toxicity tests and immunocytological experiments. Cell Culture Chamber Slides provide removable chambers that enable cell growth directly on the microscopic slide, convenient for staining and microscopic examination without cell transfer. Chambers with various well numbers and colors are available for different applications.

Features

- Convenient for microscopic observation.
- Bottom materials: Borosilicate Glass, thickness 1.0 +0.1mm. No surface treatment for glass bottom.
- Chamber color: Clear/White/Black
- Easy open flip for chamber & slide disassembly.
- No chemical adhesives used.
- Designed to prevent cross contamination.
- Alphanumeric labeling.
- Packing trays can be used as incubation racks in CO₂ incubators.
- Sterile

Cell Culture Flasks

Vent caps with 0.22 µm hydrophobic filters to ensure gas exchange without contamination

Vent caps and plug seal caps

Yellow caps for non-treated flasks

NEST cell culture flasks are available in cell growth areas ranging from 25cm² to 225cm². Tissue culture treated or non-treated flasks available with a vent cap or plug seal cap to meet your requirements. Vacuum plasma tissue culture treated provides optimum cell adherence. Non-treated flasks utilize yellow caps to be different from TC flasks which have teal caps. They are for suspension cell growth.

Features

- Made of high clarity, 100% virgin polystyrene.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Frosted writing and clear graduations.
- Notched bottom for slip free stacking.
- Clear lot number for batch traceability.
- Packaged in sterile, zip-sealable bags.

731002	Vent Cap	100-150	Yes	1	8

Guidelines For Use:

1. Mix cell suspension with medium: Prepare cell suspension of required concentration in a container. Recommended volume is about 30- 50mL per layer.
2. Add the mixed liquid into the Multi-layer Flask slowly with serological pipettes. To avoid foam and bubbles, allow liquid stream to flow along the slope of the Multi-layer Flask. (Save a little liquid in pipette each time.)
3. Tips: A 10 mL pipette allows media to be dispensed at the bottom of the vessel. A 25 mL pipette allows media to be dispensed just past the NEST Logo.
4. Hold the Multi-layer Flask upright with the Logo facing you and tilt clockwise to a 45° angle on a flat work surface to partition the liquid into each layer.
5. While holding the Multi-layer Flask at a 45° angle, gently lay it flat onto the work surface with logo facing up.
6. After placing the Multi-layer Flask flat on a work surface, gently rock back and forth and side-to-side to distribute cells evenly onto culture surfaces.
7. Tips: Be careful to avoid foaming of medium, and not to spill liquid from each layer.
8. Repeat Step 3 to put the flask quickly and slightly into the incubator. Then, lay it flat as shown in Step 4. You may choose to either aspirate or pour the media from Multi-layer Flask.
9. Aspirating method: To aspirate or remove media, tilt Multi-layer Flask, with the NEST Logo facing you, counter-clock wise to a 45° angle while inverting the Multi-Flask toward you. Then, tilt Multi-layer Flask to the right, continuing to aspirate all residual media.
10. Pouring method: With Logo facing you, pour spent media from Multi-layer Flask
11. Tips: Aspirate media using a NEST 2 mL or 10mL aspirating pipette.
12. Wash with buffer for one time and add dissociating reagent (≥5mL per layer). Then, follow Steps 3-4 to distribute to dissociating reagent to each layer.
13. Neutralize with inactivating solution and mix following Steps 3-4. Gently swirl to dislodge cells completely.
14. Follow Step 7 "Aspirating Method" protocol and collect cell suspension using a NEST 10mL serological pipette.
15. Follow Step 8 "Pouring Method". Pour the cell suspension into a NEST conical tube.
16. Rinse with additional wash buffer if needed.
17. Search "NEST Multi-layer Flask" video on NEST website or Youtube.

Cell Scrapers

Specially designed cell scrapers can be used to scrape and collect cells easily and effectively. Push the handle with slight pressure to change the blade angle. Then push down the handle towards the bottom of the container. Rotate the handle slightly to make the blade twist to right direction.

Features

- Free rotating blade, makes the blade twist to the right direction.
- Two sizes are available.
- Easy-tear sterile packing.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Individually Packaged.

Cat.No.	Spec(mm)		/Case
	Total Length	Blade Width	
710001	220	13	100
710011	280	20	100

Cell Strainers

NEST Cell Strainers are ideal for obtaining uniform single cell suspension from various sources. Nest Cell Strainers are made from nylon with 3 different mesh sizes (40 µm, 70 µm and 100 µm), showing optimal performances in a variety of applications such as stem cell & primary cell preparation.

Features

- Ideal for stem cell and tissue-derived primary cell preparation.
- Fits into nearly all 50ml conical tubes including BD Falcon (tm), TPP and MidSci brands.
- Tab molded within upper ring enables easy sterile handling.
- Sterilized by gamma irradiation.
- Non-Pyrogenic, DNase/Rnase free.
- Individually Packaged.

Cat.No.	Spec (µm)	Color	Sterile	/Case
258369	40	Blue	Sterile	50
258368	70	Natural	Sterile	50
258367	100	Yellow	Sterile	50

Serological Pipettes

Features

- Made of high clarity, 100% virgin polystyrene.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Edged color-coded band for identification.
- Negative graduations for extra volume.
- Polyolefin fiber filter to reduce contamination.

Serological Pipette, Individually Wrapped, Sterile

Cat.No.	Volume (mL)	/Pack	/Case

Pasteur Pipettes

Conventional consumables for quantitative transfer of liquids, in the field of experimental direction of pipetting operations such as biology and chemistry. Cell culture laboratory liquid transfer, dosing, aspiration or other liquid transfer.

Features

- Good chemical stability
- Transparent with clear graduations for easy observation
- Pipette can be twisted for use with micro vessels and special-shaped containers
- High precision and good repeatability
- Individually wrapped, sterilized by EO
- DNase/RNase, endotoxin and pyrogenic free

NEST BioFactory™ Systems are compact, multi-layer, single-use cell culture systems designed for easy scale-up cell culture applications such as production of vaccines, monoclonal antibodies or pharmaceuticals. They're versatile and easy-to-use system for medium to large scale research or commercial production with reduced contamination risk. Narrow mouth caps available for tubing solutions.

Features

- Made of high clarity, 100% virgin polystyrene.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Individually packaged in double-layer sterile bags.
- TC treated, good for cell attachment and growth.
- Clear lot number for batch traceability.
- Ultrasonic welding without extrinsic ingredients.
- Excellent welding line design can avoid producing particles during welding and make the biofactory stronger (Under Features 7th line).
- Vent caps with 0.22 μm hydrophobic filters for gas exchange without contamination.
- Wide mouth is applicable to pour culture medium directly. Narrow mouth is applicable to operate with the aseptic pipeline.
- Growth kinetics are the same as cells grow in the cell culture flasks. Applicable to large-scale culture adherent cells.
- Large growing area. Just a single operation, you can cultivate a large number of cells and reduce contamination.
- Applicable to automatic machine.
- Standardize operations to reduce batch differences.

Cat.No.	Layer	Cultivation Area (cm ²)	Descriptions	/Case
771001	1	647	2 Wide Plug Seal Caps with extra 16 sterile wide vent caps packaged separately	8

773403	40	25,295	1 Wide Plug Seal Cap & 1 Narrow Plug Seal Cap with extra 2 sterile wide vent caps & 2 sterile narrow vent caps packaged separately	2

Large mouth design for easy pouring of the medium directly;

The small mouth design for easy connection with the feeding systems;

Vent Cap : 0.22 µm hydrophobic gas permeable membrane, hindering bacteria and water, can also avoid liquid swelling.

NEW

Biofactory 10 Chamber, Pre-installed with Transfer Cap System

“NEST BioFactory (10 Chambers) pre-installed with transfer cap system” is a BioFactory pre-installed a set of transfer tubes and filter, which can directly transfer culture media and cells to or out of BioFactory in a sterile environment by connecting tubes, without change caps or connect tubes, greatly reduce the risk of exogenous pollution in the drug development and production process, simultaneously omit the operations of tube design, assemble and sterilization, improve the production efficiency.

Cat.No.	Descriptions	/Case
774301	Biofactory 10 Chamber Pre Installed with a Vent Filter (0.22 µm, 62 mm Diameter) and a 80 mm Hose(1/4" ID, 3/8" OD)	2

BioFactory with 2 Solid Overcaps

NEW

Solid Overcaps can be used directly on the adaptor caps to block dust and bacteria.

Guidelines for use Cell culture

Pour the prepared suspension into the BioFactory™ (recommended volume of 150-200 ml per layer).

Turn the BioFactory™ Chamber 90° make sure the liquid at the same horizontal.

Turn the BioFactory™ Chamber 90° so that the filling and venting ports are up (as shown). It is normal for the medium level in the bottom chamber section to be slightly higher.

Gently lower the BioFactory™ Chamber to its normal horizontal incubation position and gently tilt the chamber back and forth until the surface of each chamber is completely covered with medium.

Put the BioFactory™ into the incubator.

Watch operation video

1. Please pre-heat the cell factory and culture medium to the culture temperature: since it takes a long time for a large incubator to reach the set culture temperature, pre-heating the cell factory and culture medium to the culture temperature before starting the experiment may speed up cell attachment and significantly increase cell recovery.
2. Slow operating is required to avoid occurrence of air bubbles caused by sharp shaking: air bubbles may lead to flowing the medium from an upper layer to a lower layer.
3. Avoid spraying alcohol onto the breathable cover, since alcohol may wet the hydrophobic membrane filter and make it impermeable and consequently affect the gas exchange or cause pressure imbalance during operations.

Cell Harvest

1. After the culture is completed, pour the culture medium out.
2. Wash the factory with the calcium-free and magnesium-free phosphate buffer solution (CMF-PBS) (40-50 ml/layer) and if necessary, repeat the washing process.
3. Digestion: pre-heat the digestion solution (10-40 ml/layer) in advance.
4. Collection: centrifuge for 5 min at 1000 rpm, remove the digestion solution and collect cells.
5. Washing: wash the incubator with CMF-PBS or culture medium after digestion.

Precautions

1. Ensure that the culture surface of each layer is completely immersed in the CMF-PBS, and gently shake the cell factory forward and backward to wash off the residual culture medium.
2. Distribute the digestion solution evenly to each layer; gently tilt the incubator forward and backward, left and right to ensure that the digestion solution has completely covered the culture surface; gently tap the incubator to help the cells detach from the surface.
3. Since it is unable to clearly observe the digestion status of the cells in the middle layers of a cell factory, it is recommended to refer to the digestion status of a culture flask or a single-layer cell factory under exactly the same culture conditions. Or, use a dedicated observation platform for multiple-layer cell incubators to observe the growth status of cells in each layer.
4. If there are numerous cells present in the washing solution or the culture layers of the cell factory, it is necessary to wash multiple times or adjust the procedure of cell digestion.
5. Even a slight deviation of the culture temperature may affect the cell harvest rate, so it is required to pay close attention as to whether or not the culture temperature is exactly the set temperature.

125/250/500/1000mL Erlenmeyer Flasks

Features

- PETG Bottle
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Both vent filter caps and seal caps are available.
- Vent caps with 0.22 µm hydrophobic filters for gas exchange without contamination.

2/3/5L PC High Efficient Erlenmeyer Flasks

High Efficient Erlenmeyer Flask VS Erlenmeyer Flask

3L High Efficient Erlenmeyer Flask

3L Conical Erlenmeyer Flask

Take 3L high efficiency erlenmeyer flask and 3L conical erlenmeyer flask as example:

- For the same shaker, more 3L high Efficient Erlenmeyer flask can be placed on, greatly saving space.
- The breathable membrane of the high efficient Erlenmeyer flask cap is bigger, which enables a higher oxygen flux.
- Equipped with Transfer Cap, safer and convenient.

2/3/5L Erlenmeyer Flasks

2/3/5L PC High Efficient Erlenmeyer Flasks

High-efficiency, large-volume culture flasks allow cells to show strong viability with large expression amount of proteins in the culture of mammalian cells and insect cells. During the culturing process, the use rate of the shaker is significantly increased, and the survival rate and viability of cells are both dramatically elevated. NEST culture flasks also provide high repeatability, which allows highly inter-batch consistency of cell growth and yield.

Features

- PC bottle, which meets the USP Class 6 Standard, with high transparency, has strong impact resistance, oxidation resistance and can withstand a high temperature up to 121 °C.
- There's a scale made by injection molding on the flask body to facilitate observing the filled liquid volume.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Individually packaged in sterile bag.

Advantage of Baffled Bottom

Baffle-designed erlenmeyer flasks promote optimal and consistent solution agitation when used with flask shakers.

Advantage of 3L Wide-mouth

The bottom diameter of the 3L wide-mouth high efficiency erlenmeyer flask is consistent with that of the 3L high efficiency erlenmeyer flask, and its mouth diameter adopts the neck size of the 5L high efficiency erlenmeyer flask, which not only saves space usage, but also increases oxygen flux, also increasing the efficiency of cell culture.

Transfer Caps for High Efficient Erlenmeyer Flasks

Features

- Closed system reduces the risks of contamination during liquid transfer.
- The caps and connection points are a one-piece construction, reducing the risks of leakage and media residue.
- A variety of tubing diameters are available and aseptic welding of liquid inlet tubing under normal conditions is supported.
- High-quality materials and smooth inner wall of the tubing provide an excellent transfer performance.
- Sterilized by E-beam, SAL=10⁻⁶.
- Endotoxin-free, and no ingredients of animal origin.
- Individually packaged in sterile bag.

Bi-directional Liquid Transfer Cap System

An Adaptor Cap Connected to a 0.22µm Filter (φ33mm), a TPE External Liquid Transfer Tube (1/8" ID, 1/4" OD), a PTFE Internal Liquid Transfer Tube (1/6" ID, 1/4" OD), Sterile, 1/pk, 4/cs

Compatible with 2/3/5L high efficient Erlenmeyer flasks. The liquid transfer is achieved by the connection of a peristaltic pump between the Erlenmeyer flask and the device. Upon completion of the transfer, the transfer cap can be replaced with a vent cap for culture.

Cat.No.	Compatibility	Cap Dia. (mm)	External Liquid Transfer Tube		Internal Liquid Transfer Tube		/Pack	/Case

Inverted Liquid Transfer Caps

An Adaptor Cap Connected to a 0.22µm Filter (φ45mm), a TPE External Liquid Transfer Tube, a PTFE Internal Liquid Transfer Tube (1/16" ID, 1/8" OD), Sterile, 1/pk, 4/cs

Compatible with 2/3/5L high efficient Erlenmeyer flasks. When the liquid transfer is required, the liquid is transferred under gravity with the inverted Erlenmeyer flask.

Transfer Caps

Transfer Caps for High Efficient Erlenmeyer Flasks

Multi-Function Liquid Transfer Cap System, with Quick Sampling Connector

A Vent Cap (0.22 μ m), Connected to a 0.22 μ m Filter (ϕ 62mm), a TPE External Liquid Transfer Tube (1/8" ID, 1/4" OD) with a Quick Sampling Connector and a 0.22 μ m Filter (ϕ 33mm), a PTFE Internal Liquid Transfer Tube (1/6" ID, 1/4" OD), Sterile, 1/pk, 4/cs

Compatible with 2/3/5L high efficient Erlenmeyer flasks. Different from bi-directional liquid transfer cap, the multifunctional transfer cap can be directly placed in an incubator for culture after the liquid transfer is completed. It can reach a large air flux. The quick sampling connector is composed of a sampling nozzle and a one-way valve, which can prevent the liquid from flowing backwards during the sampling process and ensure the aseptic sampling. The liquid inlet tubing is provided with a PTFE needle filter, which solves the issue of liquid remaining in the tubing during the feeding process.

Mini Bio Reactor Tubes

This product is a test tube specially used to grow cells. It has good chemical resistance and high mechanical strength. Suitable for any 50ml standard centrifugal device.

Features

- USP VI Polypropylene.
- High transparency, easy to observe.
- Vent caps with 0.22 μ m hydrophobic filters for gas exchange without contamination.
- Packaged in sterile, zip-sealable bags.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.
- Can be used for centrifugation.

Cat.No.	Volume	/Pack	/Case
788211	50 mL	10	100

Vacuum Filtration Systems

NEST Disposable Vacuum Filtration System is useful for large volume sample separation and sterilization for tissue culture media and other biological buffers. The units include PES or PVDF membrane filters with graduated filter tops made with polystyrene, and Acrylonitrile-Butadiene-Styrene necks with polystyrene receiving bottles. A separated sterile polyethylene cap is included. Filtration system is manufactured from raw material of high transparency polystyrene (PS) in three different volumes: 250mL / 500mL / 1000mL. They are available in three styles: complete filter/storage bottle systems, bottle top filters, and receiving bottles only.

Product Parameters

Volume (mL)	Membrane Dia(mm)	Capacity(mL)	Max.Temp (°C)	Neck Dia(mm)	Height (mm)	Material of Neck
250	50	250	45	45	198	ABS
500	90	500	45	45	247	ABS
1000	90	1000	45	45	280	ABS

Membrane Type	Hydrophilicity	Features	Application Directions	Cautions
PES	Hydrophilic	Low protein adsorption, high flow rate, wide PH range, high chemical compatibility, good heat resistance	For general culture media and aqueous solutions, polar or middle-polar solvents, neutral aqueous solutions	Should not be used for chloroform, esters, amides and strong acids or strong bases.
PVDF	Hydrophilic	Wide practicability, good oxidation resistance and heat resistance	May be used for aqueous solutions and most solvents, including strong non-polar solvents. Ideal for preparations of HPLC and GC	Should not be used for strong acids and bases
MCE	Hydrophilic	Strong chemical compatibility and low protein adsorption, the optimum pH range is 3-6;	Used for particle analysis of general culture media and aqueous solutions. HPLC sample preparation.	The set should not be used for filtration of ethanol and alkaline solutions. The working temperature should not be over 40 °C.
CA	Hydrophilic	High flow rate and heat stability as well as very low adsorption, stable within the range of pH 4-8.	It may resist most alcohols and oils, and is suitable for sterling filtration of aqueous solutions, buffers, serum and culture media, as well as filtration of the moving phase of HPLCD.	The CA membrane may accommodate a smaller volume of buffer since it has low hydrophilia.

Vacuum Filtration Systems

Features

- High flow rates and throughput.
- Low protein binding and low chemical extractable.
- Pore size: 0.22 μm .
- Non-Pyrogenic, DNase/Rnase free.
- Sterilized by E-beam, SAL=10⁻⁶.
- Individually packaged in sterile bag.

Syringe Filters

Features

- For sample volumes of 2mL to 100mL.
- Retention volume <115 μL .
- Maximum operating temperature: 100°C autoclave at 125°C for 15 min.
- Maximum operating pressure approximately 100 psi.
- Individually wrapped.
- Non – pyrogenic, Non – cytotoxic.
- DNase / RNase – free, Human DNA – free.

Cryogenic Vials

O-ring Upgrade

O-rings were integrated injection-molded with the internal thread caps, manual assembly of O-rings is no longer required, reducing the risk of contamination.

Features

- Made of USP VI polypropylene.
- Autoclave at 121 C /15 lb.
- Sterilized by E-beam, SAL=10⁻⁶. Non-pyrogenic, DNase/RNase and human DNA free.
- Round Bottom, Self-standing. There are clear graduations and white marking area on 1.2/2.0/3.0/4.0/5.0ml volume vials.
- Recommend to store in gas phase of the nitrogen tank.

3D Barcode Cryogenic Vials

The two-color vial body of an integrated injection molding can realize multi-code tracking, and it can support the traceability of samples and data sharing among multiple users, laboratories and automation, making the warehousing and ex-warehousing of samples more convenient and faster, while ensuring the safety of the sample storage process.

Features

- The vial body is made of medical-grade cryogenic polypropylene (PP), which meets USP Class-6 standards, and the vial is recommended to be used in $-196\text{ }^{\circ}\text{C}$ liquid nitrogen phase;
- DNase/RNase free, non-endotoxin;
- Electron beam sterilization, SAL = 10^{-6} .

Three-code-in-one 2D barcode on bottom, and 1D barcode on side

Precautions

- After the cryogenic vial is taken out of the liquid nitrogen, its bottom should be wiped with a dry towel, so that the QR code can be better identified;
- The freezing storage sample size should not exceed the maximum working volume required by the cryogenic vial;
- During the freezing storage, the vial cap must be tightened, to prevent liquid nitrogen from entering during the freezing process;
- Before the cryogenic vial is taken out of the liquid nitrogen, proper protective measures should be taken first, to avoid causing safety problems in the laboratory.

3D Barcode Cryogenic Vials

3D Barcode Cryogenic Vial SBS Format, Compatible with Brooks System

The product meets the SBS standard and provides an effective safety guarantee and management for biological sample libraries and other warehouses of various chemicals and biological products stored at low temperatures.

3D Barcode 1.8 mL Cryogenic Vial

The size of the vial body is suitable for the common freezing boxes in the market, which is convenient for customers to use.

External Thread, Double Secure Cap

- Excellent sealing performance: permanent reversal prevention;
- High storage safety: the inside forms a closed and isolated space separated from the outside without leakage, favorable for storage and transportation.
- Memory of use history: the middle cover will be punctured when taking sample out, leaving a mark to know it's been used.
- This function is to ensure the original fidelity of the sample;
- Convenient sampling without contamination: the soft rubber sealing layer can be punctured with a pipette tip or a syringe needle. The outer cover won't be contaminated by the sample, ensuring safety of the personnel and environment.

15 mL & 50 mL Centrifuge Tubes

NEST centrifuge tubes could be commonly used to collect cells and separate biomacromolecules by centrifugation in biochemistry and other biological fields. They can also be used to store photosensitive samples and special chemiluminescence reagent.

Features

- Printed Graduations (with marking area).
- Polypropylene tube.
- High centrifugal strength up to 12,000xg.
- Flat markable cap with leakproof seal.
- One-hand operation design for the caps provides easy handling.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.

Premium Level

- Meets the requirements of analytical level.
- High strength non-toxic materials.
- Raw material comply with USP VI requirements.

250 mL & 500 mL Centrifuge Tube

The 250 mL & 500 mL centrifuge tubes can process a large number of samples at one time and are suitable for separation and harvest of large cells, supernatants, bacteria, yeast and tissue samples, therefore they are widely used in the field of life sciences and clinical experiments and can meet the requirements of biological analysis.

Application

- Separation of sediments after chemical reactions for harvest and application.
- Harvest of biomacromolecules, inorganics and organics.
- In biochemistry and other biological fields, usually used to centrifuge and collect a large volume of cells, biomacromolecules and supernatants.

Features

- Unique structure design of the cap provides double security, further improving the tight seal ability.
- Increased the thickness of conical bottom in order to improve the maximum centrifugal limit.
- Polypropylene tube.
- Max. centrifugal limit 7000xg.
- Temperature range: -80 °C~120 °C.
- Clear scale.
- DNase, RNase and pyrogen free.
- Electron beam sterilization, SAL=10⁻⁶.
- Separation of sediments after chemical reactions for harvest and application.
- Harvest of biomacromolecules, inorganics and organics.
- In biochemistry and other biological fields, usually used to centrifuge and collect a large volume of cells, biomacromolecules and supernatants.

Centrifuge Tubes, Pre-installed with Transfer Caps

250 mL Centrifuge Tubes,
Pre-installed with Transfer Tubes

500 mL Centrifuge Tubes,
Pre-installed with Transfer Tubes

50 mL Self-standing Centrifuge Tubes,
Pre-installed with Transfer Tubes

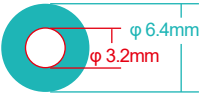

NEST closed system solutions achieves a closed transfer of liquids, where culture medium or cells are aseptically transferred to a cell culture bag, bioreactor or large shake flask directly through the tubing connection. It greatly reduces the risks of exogenous contamination during drug development and production process, shortens the time of customers for tubing design, assembly and sterilization, and improves production efficiency.

Features

- Reduces the risks of contamination during liquid transfer.
- The caps and connection points are a one-piece construction, reducing the risks of leakage and media residue.
- A variety of tubing diameters are available and aseptic welding of liquid inlet tubing under normal conditions is supported.
- High-quality materials and smooth inner wall of the tubing provide an excellent transfer performance.
- Sterilized by E-beam, SAL=10⁻⁶.
- Endotoxin-free, and no ingredients of animal origin.
- Individually packaged in sterile bag.

Centrifuge Tubes, Pre-installed with Transfer Caps:

An Adaptor Cap Connected to a Filter (0.22µm, φ24mm), a Silicone External Liquid Transfer Tube (50cm, 1/8" ID, 1/4" OD) with a Male Luer Connector and a Luer Cap, a PTFE Internal Liquid Transfer Tube (1/6" ID, 1/4" OD), Sterile, 1/pk, 4/cs

Microcentrifuge Tubes

NEST centrifuge tubes could be commonly used to collect cells and separate biomacromolecules by centrifugation in biochemistry and other biological fields. They can also be used to store photosensitive samples and special chemiluminescence reagents.

Features

- USP VI grade polypropylene material, free from heavy metal.
- RCF: 30,000 xg.
- Special safelock cap design provides secure lid sealing.
- Clear graduations and frosted marking area.
- Easy opening and closing.
- Autoclavable.
- RNase free, endotoxin level less than 0.1EU.
- Both sterile and non-sterile tubes are available.

Universal Pipette Tips

Universal Pipette Tips

NEST Aerosol Filter Pipet Tips are designed and manufactured using premium-grade 100% polypropylene for the most critical molecular biology liquid handling applications. All Nest Aerosol Filter Tips are gamma irradiated Sterile and Certified RNase/DNase-Free, human DNA-Free, and Pyrogen-Free. In addition, Nest Aerosol Filter Tips are Ultra-Clear with a Fine-Point design for the convenient, precise pipetting of precious nucleic acid and protein samples and are designed to be Universal-fit for the majority of research-grade pipettors.

Features

- Certified RNase, DNase, Human DNA, Pyrogen-Free.
- Low-Retention, Fine-Point design for lowest sample adhesion.
- Ultra-Clear polymer withstands organic solvents and provides clear, error-free pipetting.
- Effective hydrophobic aerosol barrier eliminates carry-over and pipettor contamination.
- Gamma-irradiated Sterile and Graduated.
- Universal-fit for most single and multichannel pipettors.

Rainin LTS Pipette Tips

NEW

With the constant efforts and many tests of our engineers, we are glad to announce that the alternative RAININ LTS tips are also available for purchase. This kind of tip is different from the universal tips. With a similar design to RAININ LTS Pipette Tips, it could be compatible well with RAININ LTS pipettes.

Meanwhile, like all other pipette tips, it is made from virgin polypropylene and manufactured in a Class 100,000 cleanroom. Also, our smart production line ensures minimal human contact during production. Thus, these tips are free of DNase, RNase, human DNA, and endotoxins.

Features

- Made from virgin polypropylene.
- Compatible well with RAININ LTS pipettes.
- RNase, DNase, Human DNA, Pyrogen-Free.
- Sterilized by E-beam SAL=10⁻⁶

Automation/Robotic Tips

NEST automation/robotic tips can be used for research and development and other commonly used applications with needs of high-throughput pipetting in genomics, proteomics, cytomics, immunoassays, metabolomics, biopharmaceuticals.

Compatible with Hamilton/Tecan/Beckman/Agilent Systems.

Filter or non-filter style can be selectable, it has super hydrophilicity, it can shield aerosol, and eliminate the risk of cross-contamination of samples.

Variety of packaging are available.

Both conductive and clear are available.

Automation/Robotic Tips

Features

- Adopt medical grade polypropylene material, which is manufactured by precision mold, and the material batch is stable.
- DNase-and RNase-free, no heat source contamination.
- Electron beam sterilization.
- Manufacturing facility equipped with class 100,000 clean-room, products packing under sterile condition.
- Unique process technology ensures that the inner surface of the tip is smooth and reduces liquid residue.
- Carry out structural drawing and measurement according to the original adapter to ensure that the product has good air tightness and adaptability.
- Online testing equipment is used to control the size and concentricity of products in the production line.

Effective quality inspections are conducted for strict quality management and control per the client's needs, including tests for DNase, RNase, proteases and pyrogens.

• Air Tightness Test

Precise equipment are used to test the air tightness between the tip and the adapter, to ensure good air tightness for each batch of products.

• Tests for Resistance and Cv Values

A certain number of products are sampled for each batch for inspection, which is conducted using precise and unique measuring tools to ensure the accuracy and reliability of the test results to ensure the uniform conductivity of products.

• Online equipment testing (≤3%)

Tests for Resistance and CV Values of Automation Conductive Tips.

Clear Robotic Tips, Compatible with Agilent Systems

NEW

Low-retention Tips, Boxed, Sterile

Low-retention tips are an excellent choice for transferring viscous liquid, which can effectively reduce the phenomenon of liquid hanging on the wall and make the experiment more accurate.

Deep Well Plates

The length and width of the deep well plate comply with the SBS international standards. The deep well plates of NEST have a variety of specifications, conforming to the needs of fully automatic workstations and experiments.

Features

- Made of high-quality, Class VI level PP material with high stability, can be used to store most types of organic solutions, acidic and alkaline solutions, etc.
- The dimension of deep well plates conforms to ANSI standard and international SBS standard, compatible with multi-channel pipette and automation equipment.
- Autoclavable at 20Psi, 121 °C for 20 minutes, great heating uniformity.
- Can be stored under the subzero temperature of 80 °C.
- Maximum sustainable centrifuge force from 3000g to 4000g. Uniform bottom, wells, and the thickness of the sidewall. The flat upper of the plates, easy to seal.
- Minimum residual liquid, low heavy metal content.
- Alphabetical sorting and cut angle mark for convenient tracking of samples.
- Each package has a separate article number/batch number identification, facilitating quality tracking. Can be sealed by three materials: self-adhesive sealing mat, silicone sealing mat, or heat-sealing film.
- Produced and packed in Class 100,000 clean workshop.
- Non-Pyrogenic, DNase/Rnase free.
- Wide applications, such as high-throughput screening (HTS), tissue culture, continuous dilution, reagent transfer, and nucleic acid extraction, etc.
- Optional sterilization methods: ethylene oxide (default), gamma-ray, electron beam.

Application

Genomic DNA extraction, plasmid DNA extraction, and nucleic acid extraction and purification of various samples. High-throughput automatic liquid operation to achieve high-throughput operations, such as protein precipitation, liquid extraction, and processing of animal tissues, bacteria, plants, soil, clinical samples, yeasts, etc.

Sealing Film

Aluminum Sheet for Deep Well Plates & PCR Plates

NEW

Features

- Widely used in sealing of plates and PCR for liquid store.
- 100% leakage, heat sealing technology has been proved superior to other sealing methods.
- Effectively used for long-distance transportation, with low temperature sterilization.
- No adhesives, avoid contamination of samples.
- Not easily dissolved by organic solvents, such as DMSO.
- Easy to peel.

Cat.No.	520002	Thickness	0.18 mm
Temp/Time	170~175°C, 4~5s	Packing	100/pk
Size	125*84 mm		

Should use with heat sealing instruments.

Adhesive Sealing Film for Deep Well Plates

NEW

Cat.No.	520001	Thickness	0.18 mm
Temp/Time	/	Packing	100/pk
Size	144*87 mm		

Can be used directly.

Features of Silicone Sealing Mat

- The product is easy to open and close, and can effectively seal the deep well plate, which is convenient for operation and saves time.
- Good sealing performance can prevent the volatilization of a variety of solvents.
Withstand a wide temperature range (- 50 °C - 200 °C) and is suitable for various experiments.
- Excellent chemical corrosion resistance and is used for low-temperature preservation.
- The pre-opening design allows the pipette tip to enter the hole without damage to the silicone sealing mat cover.

When using a thermal cycler with fluorescence detector above the samples, NEST white PCR plates effectively prevent crosstalk between wells. The Nest white PCR plate also allows for high accuracy of detection when signal intensity is low. Nest clear PCR plates are designed for PCR machines where the fluorescence detector is located below the sample plate.

Features

- Made of high quality polypropylene to ensure minimal loss of reaction solution.
- Flat surface, thick and solid, not easy to deform.
- Elevated edge of the hole can better prevent cross contamination.
- Compatible with NEST pressure sensitive film, self-adhesive film and hot sealing film.
- Autoclavable.

PCR Plates

Compatible with Roche Systems

ELISA Plates

NEST ELISA plates can be widely used in enzyme-linked immunosorbent assay, immunological reaction of antigen and antibody, labeled antibody, antigen purity, concentration and ratio, protein adsorption detection, etc.

Features

- Made of polystyrene.
- Conform to SBS/ ANSI.
- Both detachable and undetectable plates are available.
- Flat and clear bottom.
- Excellent well uniformity, CV <5%
- Non-sterile, DNase/RNase and Human DNA Free, Non-pyrogenic

Cat.No.	Description	/Pack	/Case
504201 (old cat# 505201)	96 Well ELISA Plate, Detachable, High Binding, White Frame & Clear Well	5	50
514201 (old cat# 515201)	96 Well ELISA Plate, Undetachable, High Binding, Clear	5	50
504271 NEW	96 Well ELISA Plate, Detachable, High Binding, White Frame & White Well	5	50

Petri Dishes

RODAC Dish

These non-treated polystyrene plates are transparent and DNase/RNase-Free. The bottom has a ridge allowing for easy handling and stacking. The plate has three vents for gas exchange.

Features

- Made of high clarity, 100% virgin polystyrene.
- Flat, transparent surface.
- Stackable for easy storage and handling.
- Sterilized by E-beam, SAL=10⁻⁶.
- Non-Pyrogenic, DNase/Rnase free.

NEW

Petri Dishes with Locks

Slot on the lid.

The clasp on the bottom.

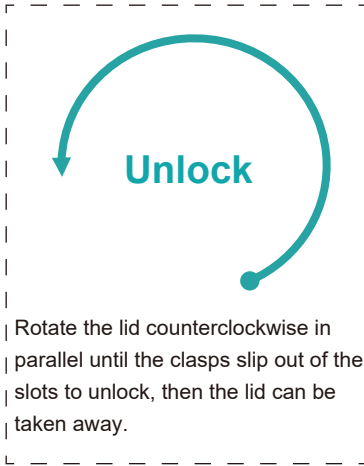

Technical drawing of parallel sliding clasps design.

Parallel Sliding Clasps Design

Each dish has three sets of parallel sliding clasp, compare with standard dish, you don't need to worry about the lid or bottom falling off if you don't hold it properly.

Cover the lid, rotate the lid clockwise in parallel, until the clasps slide into the slots to lock.

Rotate the lid counterclockwise in parallel until the clasps slip out of the slots to unlock, then the lid can be taken away.

L-Spreader

Using a grinding tool with high precision in combination with an ergonomic design, the efficient sterile L-Spreader specialized for Asian scientific researchers is developed and manufactured to effectively solve problems such as contamination or uneven application of spread plate in bio-labs, which helps to make domestic biological testing practitioners more efficient and simplify their tedious work during biological experiments.

Features

- Sterile L-Spreader, using medical PS.
- EO Sterilized.
- Smooth and flat surface that solves problems such as contamination or uneven application of spread plate in bio-labs;
- Length of handle: 144mm, diameter of spreading: 33mm, suitable for 3.5cm, 6cm, 9cm, 10cm petri dishes and etc. Ideal for spreading cells or bacteria evenly in the culture dish.

Cat.No.	Name	/Pack	/Case
711001	L-Spreader, Blue	200	2,000

Inoculating Needles / Loops

Features

- PP material, hydrophilic.
- Used in microbiology experiments.
- Different colors for identification.
- Flexible handles for easier collection and inoculation.
- Sterilized by Ethylene Oxide.
- Easy-tear sterile individual packaging.

PET/PETG Square Media Bottles

It is mainly used for storing and sampling active pharmaceutical ingredients, bulk intermediates, and also for preparing, storing buffers, culture solutions or long-term storage of pH sensitive liquids.

It can be used to store reagents but cannot be used as heating vessels.

Features

- Smooth surface, not easy to residue, easy to clean.
- Good chemical resistance, suitable for sample collection of various liquid particle size test, high clean reagents, particle standard materials and standard samples.
- With scale, white enamel marking area, durable. Excellent physical and mechanical properties over a wide temperature range. The bottle body is square, easy to hold, easy to store. Unique external thick collar design for easy sealing operation in experiments.
- Sterilized by E-beam, SAL=10⁻⁶.
- DNase/RNase/Pyrogen free.
- PETG Bottles are suitable for handling and reagents and medium storing critical (protein/ vaccine etc).
- PET Bottles are used for storage of culture medium, serum, buffer and long-term storage of PH-sensitive liquid. Excellent physical and mechanical properties over a wide temperature range.
- Temperature Range: from -80 °C to 50 °C.

PETG Media Bottles & Transfer Caps

NEST closed system solutions achieves a closed transfer of liquids, where culture medium or cells are aseptically transferred to a cell culture bag, bioreactor or large shake flask directly through the tubing connection. It greatly reduces the risks of exogenous contamination during drug development and production process, shortens the time of customers for tubing design, assembly and sterilization, and improves production efficiency.

Features

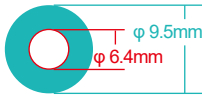

- Reduces the risks of contamination during liquid transfer.
- The caps and connection points are a one-piece construction, reducing the risks of leakage and media residue.
- A variety of tubing diameters are available and aseptic welding of liquid inlet tubing under normal conditions is supported.
- High-quality materials and smooth inner wall of the tubing provide an excellent transfer performance.
- Sterilized by E-beam, SAL=10⁻⁶.
- Endotoxin-free, and no ingredients of animal origin.
- Individually packaged in sterile bag.

Bi-directional Liquid Transfer Cap System **NEW**

Description:

An Adaptor Cap Connected to a Filter (0.22µm, φ24mm), a TPE External Liquid Transfer Tube (60cm 1/4" ID 3/8" OD) with a Tube Clamp, a Female Luer Connector and a Luer Cap, a PTFE Internal Liquid Transfer Tube (1/6" ID, 1/4" OD).

Compatibility	External Liquid Transfer Tube		Internal Liquid Transfer Tube	
	Dia.	Length	Dia.	Length
For 250mL Bottles	TPE Tube 1/4" ID, 3/8" OD	60 cm	PTFE Tube 1/6" ID, 1/4" OD	15 cm
For 500mL Bottles		60 cm		18.5 cm
For 1000mL Bottles		60 cm		23 cm

• Both with or without media bottles are available!

With bottles mean PETG media bottles, pre-installed with transfer caps.

Without bottles mean the products only transfer caps, and there are no bottles.

Round Storage Bottles

Sterile and enzyme-free plastic reagent bottles, suitable for product packaging and storage requirements in molecular biology and cell biology, laboratory medicine, genomics and proteomics and other areas. Improvement of the quality of product packaging helps to improve the company image and brand value, let your product packaging meet international standards and enter the international market.

Features

- The raw materials, premium polypropylene (PP)/polyethylene (HDPE), have excellent physical and chemical indicators and very good pressure-resistance, impact-resistance and acid and alkali resistance. PP materials can undergo autoclave sterilization at 121 °C ; HDPE can be stored at -80 °C .
- A full range of choices to meet different packaging and storage requirements.
- Wash-free, no need for tedious pre-cleaning processing work, ready to use, greatly improves the packaging effect of users. Thickened middle packaging to ensure transportation and storage safety.
- Use of professional leak-proof design for bottle mouth, with no need for inner cover or inner gasket for protection, excellent sealability.
- Guarantee of being 100% leaking-proof to ensure safety even during air transportation; wide-mouthed design for easy access of liquid.
- No biotoxicity, pyrogen-free, DNase/RNase-free, manufactured in a 100-thousand grade clean plant. The sterile plastic bottles are sterilized using GAMMA-ray.
- Introduction of imported digital-controlled production equipment with high precision; the products have fine details and comfortable touch, the body walls of which are even with high gloss, with no color difference; high uniformity between different batches.
- With respect to the process, high-class molding technologies and surface processing technologies are used, leading to smooth interior and exterior surfaces of the plastic bottles without wicking effect of reagents, subsequently significantly reducing sample wastage; the products have high interchangeability with imported ones, can be used to replace the imported ones.

Sample Vials

Features

- 6 vial cap colors (blue, red, yellow, purple, green and white).
- The vial cap color corresponds to the product code, which means that each code indicates a color.
- Made of transparent polymer polypropylene (PP).
- Special knurling design enables the vial to be stuck in the special base and tightened with a single hand.
- The flexible O-ring in the screw cap ensures safe closure of the micro spiral vial and a sound sealing effect.
- Maximum resistance to the centrifugal force reaching 20000xg.
- Electron Beam Sterilization, SAL=10⁻⁶
- No chemical residues.
- 100,000-level Clean Workshop Production.
- DNase-free, RNase-free, pyrogen-free, endotoxin-free.

Saline Solution

Three Types of Swabs

ADVANTAGE:

- Swab head is flocked nylon, and swab shaft is made of ABS (Acrylonitrile butadiene styrene).
- Non-toxic
- Individually wrapped and sterile
- CE, FDA, ISO certified

Nasopharyngeal Swab

Oropharyngeal Swab

Capture Cap Swab

Cat.No.	Descriptions	/Pack	/Case
202003	Oropharyngeal Specimen Collection Swab, Individually Wrapped, Sterile	100	5000
202004	Nasopharyngeal Specimen Collection Swab, Individually Wrapped, Sterile	100	5000
202401	Oropharyngeal Specimen Collection Swab, Capture Cap Swabs, Individually Wrapped, Sterile	100	5000
202099	Oropharyngeal/Nares Specimen Collection Swab, Individually Wrapped, Sterile	100	5000
202695	Disposable Sampler, 2 mL Vial, with Individually Wrapped and Sterile Oropharyngeal Swabs	10	50
202091	Disposable Sampler, 5 mL Vial, with Individually Wrapped and Sterile Nasopharyngeal Swabs	10	50

Operating Instructions

Oropharyngeal Swab & Capture Cap Swab:

- Gently insert swab into back of the throat and tonsillar area.
- Rub the swab over both tonsillar pillars and the posterior oropharynx, avoid touching the tongue, teeth and gums.

Nasopharyngeal Swab:

- With the patient seated, if possible, tilt the head back 70 degrees.
- Gently insert swab into the nostril along the septum floor of the nose extending straight back until the posterior nasopharynx is reached (distance from nostrils to external opening of ear).
- Rotate the swab several times while the swab is in contact with the nasopharyngeal wall.

Viral Transport Medium

Features of Viral Transport Medium

- Used for collection, storage and transportation of human nasopharyngeal virus samples.
- Unused VTM medium can be transported at room temperature.
- Sample transport temperature requirement & storage time: 2 to 4 C°, 48 h.

Disposable Samplers, Professional Using

Cat.No.	Description	/Pack	/Case
202011	Disposable Sampler, 5 mL Vial with 2.5 mL VTM, with Individually Wrapped and Sterile Oral Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202015	Disposable Sampler, 5 mL Vial with 2.5 mL VTM, with Individually Wrapped and Sterile NP Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50

202018	Disposable Sampler, 10 mL Vial with 3 mL VTM, with Individually Wrapped and Sterile Oral & NP Swabs, 1 Vial + 1 NP Swab/pk & 1 Oral Swab/pk, 100 pk/cs	1	100
202115	Disposable Sampler, 5 mL Vial with 2.5 mL VTM, 10 Vials/pk, 100 Vials/cs	10	100
202117	Disposable Sampler, 10 mL Vial with 3 mL VTM, 10 Vials/pk, 100 Vials/cs	10	100

Disposable Sampler Kits, Self-sampling Kits

NEW Products

Each kit contains 4 stickers with the same barcode. One for the vial, one for the specimen bag, one for the IFU, and one for extra use.

Cat.No.	Description	/Pack	/Case
202181	5 mL Vial with 2.5 mL VTM, with Individually Wrapped and Sterile Swab, 1 Specimen bag, and 4 Stickers with the Same Barcode	1	100
202182	10 mL Vial with 3 mL VTM, with Individually Wrapped and Sterile Swab, 1 Specimen bag, and 4 Stickers with the Same Barcode	1	100

Inactivation Transport Medium

Features

- ITM medium serves to both inactivate viruses and prevent nucleic acid degradation.
- Room temperature transport
- Samples can be stored at room temperature for 20 days.
- Used for collection, storage and transportation of viruses, chlamydiae, mycoplasma and ureaplasma.

Cat.No.	Description	/Pack	/Case
202001	Disposable Sampler, 5 mL Vial with 2 mL ITM, with Individually Wrapped and Sterile Oropharyngeal Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202005	Disposable Sampler, 5 mL Vial with 2 mL ITM, with Individually Wrapped and Sterile Nasopharyngeal Swabs, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202008	Disposable Sampler, 5 mL Vial with 2 mL ITM, with Individually Wrapped and Sterile Nasopharyngeal Swabs, 1 Vial + 1 NP Swab/pk, 100 pk/cs	1	100
202039	Disposable Sampler, 5 mL Vial with 2 mL ITM, with Individually Wrapped and Sterile Oropharyngeal & Nasopharyngeal Swabs, 1 Vial + 1 NP Swab/pk +1 Oral Swab/pk, 100 pk/cs	1	100
202006	Disposable Sampler, 10 mL Vial with 3 mL ITM, with Individually Wrapped and Sterile Oropharyngeal Swabs, 1 Vial + 1 Oral Swab/pk, 100 pk/cs	1	100
202007	Disposable Sampler, 10 mL Vial with 3 mL ITM, with Individually Wrapped and Sterile Nasopharyngeal Swabs, 1 Vial + 1 NP Swab/pk, 100 pk/cs	1	100
202038	Disposable Sampler, 10 mL Vial with 3 mL ITM, with Individually Wrapped and Sterile Oropharyngeal & Nasopharyngeal Swabs, 1 Vial + 1 NP Swab/pk 1 Oral Swab/pk, 100 pk/cs	1	100
202872	Disposable Sampler Pooling Kits, 10 mL Vial with 2 mL ITM, with Individually Wrapped and Sterile Nasopharyngeal Swabs, 1 vial + 5 swabs pool testing; 10 Vials/pk, 50 Vials/cs, 5 swabs/pk, 250 swabs/cs	1	50

Saline Transport Medium

Features of Saline Transport Medium

- Non-toxic, safe and effective for home collection.
- Produced according to the FDA standard.
- Room temperature for transportation and storage.
- After collection of the sample transportation requirement: room temperature within 48h.
- Used for collection, storage and transportation of viruses, chlamydiae, mycoplasma and ureaplasma.
- Validation: 2 x LoD (low positives) and 10 x LoD (high positives) virus samples for 56 hours (40 °C for 12 hours, then 32 °C for 42 hours) in this product can be detected by RT-PCR.

AMIES Transport Medium

- ① 5mL Normal Cap
- ② 5mL Capture Cap
- ③ 10mL Normal Cap
- ④ Capture Cap Swab
- ⑤ Oropharyngeal Swab
- ⑥ Nasopharyngeal Swabs

NEST disposable sampler (AMIES) is a collection and transport system which is used for aerobic, anaerobic and fastidious bacteria. In addition, NEST disposable sampler (AMIES) can be used for nucleic acid test of bacteria.

Features

- Simplify specimen collection, transport and processing.
- Fewer samples need to be collected offering a more comfortable experience.
- Better preservation ability: the colony number of samples was reduced by no more than $1.5 \log_{10}$ after preservation for 48h.

Transport Temperature Requirement

Before using: AMIES solution can be stored in room temperature (5 to 25 degree centigrade) for twelve months.

After using: sample could maintain viability for up to 48 hours at room or refrigerator temperature. (Neisseria gonorrhoeae survival at 24 hours per CLSI standard).

Capture Cap & Swab

- Eliminating costs associated with stocking numerous swab types.
- Just screw the cap, the swab will insert the cap automatically without human process.

202051	Disposable Sampler, 5 mL Vial with 1.2 mL ATM, with Individually Wrapped and Sterile Oropharyngeal Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202055	Disposable Sampler, 5 mL Vial with 1.2 mL ATM, with Individually Wrapped and Sterile Nasopharyngeal Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202052	Disposable Sampler, 5 mL Vial with 1.2 mL ATM, with Individually Wrapped and Sterile Oropharyngeal Swabs, 1 Vial + 1 Oral Swab/pk, 100 pk/cs	1	100
202054	Disposable Sampler, 5 mL Vial with 1.2 mL ATM, with Individually Wrapped and Sterile Nasopharyngeal Swabs, 1 Vial + 1 NP Swab/pk, 100 pk/cs	1	100
202081	Disposable Sampler, 10 mL Vial with 3 mL ATM, with Individually Wrapped and Sterile Oropharyngeal Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202085	Disposable Sampler, 10 mL Vial with 3 mL ATM, with Individually Wrapped and Sterile Nasopharyngeal Swab, 10 Vials/pk, 50 Vials + 50 Swabs/cs	10	50
202056	Disposable Sampler, 10 mL Vial with 3 mL ATM, with Individually Wrapped and Sterile Oropharyngeal Swabs, 1 Vial + 1 Oral Swab/pk, 100 pk/cs	1	100
202057	Disposable Sampler, 10 mL Vial with 3 mL ATM, with Individually Wrapped and Sterile Nasopharyngeal Swabs, 1 Vial + 1 NP Swab/pk, 100 pk/cs	1	100

Universal Transport Medium

- ① 5mL Normal Cap
- ② 5mL Capture Cap
- ③ 10mL Normal Cap
- ④ Oropharyngeal Swab
- ⑤ Capture Cap Swab
- ⑥ Nasopharyngeal Swabs

Features

- Simplify specimen collection, transport and processing;
- Used for collection, storage and transportation of viruses, bacteria, chlamydiae, mycoplasma and ureaplasma. The specimen transported in the universal transport media can be used in the laboratory to perform pathogen isolation and detection;
- Disposable use.

Transport Temperature Requirement

This product can be transported at ambient temperature. Ensure samples collected are stored between 2 degrees and 8 degrees Celsius, and transported to the laboratory within 48 hours. Please store the samples at minus 70 degrees Celsius, if they cannot be transported to the laboratory within 48 hours, please examine, inoculate, or separate the sample as soon as possible after being sent to the laboratory. Those that can be inoculated or separated within 48 hours can be stored at 4 degrees Celsius. Those that cannot be inoculated or separated within 48 hours should be stored at minus 70 degrees Celsius.

Capture Cap & Swab

- Eliminates costs associated with stocking numerous swab types.
- Just screw the cap, the swab will insert the cap automatically without human process.

Dry Saliva Collection Kits

203101

203102

203901

203111

203112

Features

- USP VI Polypropylene Tubes.
- Collection process is painless and safe.
- The humanized design of funnel conforms to the mouth shape of human, making the collection process simple and easy.
- Good sealing, effectively preventing leakage and contamination of specimens, easy to preserve and transport, safe and reliable.
- The bottom of the collecting vial is conical, which is convenient for concentrated sample processing.
- Bar codes are easy to manage digitally, and labels with writing areas are convenient for users to record information.
- RNase/DNase free, non-pyrogenic.

Cat.No.	Description	/Pack	/Case
203901	Wedged Funnels, compatible with different Tube Diameters Ranging from 9.5-20.0 mm, Individually Wrapped, 100pcs/case	1	100
203101	Dry Saliva Collection Kit, Each Kit Includes a 5 mL Vial with a Screw Funnel, a Cap and a Specimen Bag, Sterile Pack, 100 kits/case	1	100
203102	Dry Saliva Collection Kit, Each Kit Includes a 10 mL Vial with a Screw Funnel, a Cap and a Specimen Bag, Sterile Pack, 100 kits/case	1	100
203111	Dry Saliva Collection Kit, Each Kit Includes a 5 mL Vial with a Wedged Funnel, a Cap and a Specimen Bag, Sterile Pack, 100 kits/case	1	100
203112	Dry Saliva Collection Kit, Each Kit Includes a 10 mL Vial with a Wedged Funnel, a Cap and a Specimen Bag, Sterile Pack, 100 kits/case	1	100

Saliva Collection Kit

Features

- Use at normal room temperature;
- The 5 mL preservation solution vial is filled with 2 mL ITM solution;
- Samples can be stored and transported at room temperature;
- DNA samples can be stored stably for 12 months;
- RNA samples can be stored steadily for 1 month.
- This preservation solution has good antibacterial performance and high storage efficiency and can ensure the integrity of viral nucleic acids in the sample when it is used to store inactivated viral samples.

Introduction

- The product is used to collect high-quality DNA/RNA samples in the saliva.
- The collection process is painless and won't cause any injury or discomfort to the human body.
- The collected samples can be used for various biological experiments such as enzymatic hydrolysis, PCR and next-generation sequencing and are widely used in the collection and preservation of specimens in hospitals, scientific research institutions and households.

Cat.No.	Description	/Pack	/Case
203011	Disposable Sampler, Saliva Collection Kit with ITM, Each Kit Includes a 10 mL Vial with a Funnel, a Separate 5 mL Vial Filled with 2.0 mL ITM, Sterile Pack, 100 kits/case	1	100

Saliva/gargle Collection Kits

NEW Products

Introduction

The disposable sampler saliva/gargle collection kit is intended for the collection and transport of clinical samples from the collection site to the testing laboratory.

Both the methods of collecting saliva, and gargling were printed on the IFU. You can choose a preferred method as you wish. This product is easy to carry and easy to operate.

Features

- Use at normal room temperature.
- Samples can be stored and transported at room temperature.
- Flexible to use, can be easily collected in the laboratory, clinic, or even at home.
- It is suitable for a wide range of object groups, especially for children and patients who do not meet the blood sample collection conditions.
- This preservation solution has good antibacterial performance and high storage efficiency and can ensure the integrity of viral nucleic acids in the sample when it is used to store inactivated viral samples.

Cat.No.	Description	/Pack	/Case
203051	Disposable Sampler, Saliva/Gargle Collection Kit, Paper Box Packed, Sterile , Each Kit Includes: One Funnel, One empty 5mL Vial, and One 5mL Vial Filled with 4.0 mL Saline Solution	1	100
203061	Disposable Sampler, Saliva/Gargle Collection Kit, PE Plastic Bag Packed, Sterile , Each Kit Includes: One Funnel, One empty 5mL Vial, and One 5mL Vial Filled with 4.0 mL Saline Solution	1	100
203071	Disposable Sampler, Saliva/Gargle Collection Kit, Blister Packed, Sterile , Each Kit Includes: One Funnel, One empty 5mL Vial, and One 5mL Vial Filled with 4.0 mL Saline Solution	1	100

NEW Products

Introduction

The main raw material is cyclic olefin copolymer (COP). As an alternative for borosilicate glass, COP has the characteristics of high transparency, high rigidity, high heat resistance, low refractive index, low protein adsorption, and drug compatibility test producing no flake. The temperature range is from -196 °C to 121 °C.

NEST Penicillin COP Bottle is featured with good steam tightness and resistance against acid, alkali, and abrasion.

Sterilized by electron beam and can be directly used for prefilling of an injection solution, freeze-dried powder, and other kinds of drugs and easy to be stored and transported.

Features

Class VI Standard Raw Materials

COP raw materials meet USP Class VI standards. Producing and packaging are in GMP standard cleanrooms that meet ISO 9001 and ISO 15378 standards.

Accurate

Depending on imported injection molding equipment and sophisticated testing instruments, our products have precise size and excellent appearance.

Safe

Sterilized by E-beam, SAL=10⁻⁶, RNase/DNase free, non-pyrogenic.

Customized Packing & Cap Color

Various specifications are available. Packaging specifications can be customized according to customers' requirements.

Application

NEST Penicillin COP Bottle is mainly used in the packaging of highly stable complex molecules and sensitive drugs, such as anti-cancer, anti-tumor, cardiovascular and cerebrovascular biological reagents, which usually have high added value. For drugs or high protein content drugs with PH value greater than 9, NEST Penicillin COP Bottle is suitable for packaging and transportation.

Cat.No.	Description	Sample Package
207001	AccureVial™, Penicillin COP Bottles, 5 mL	10 Vials/Cs

Packaging specifications can be customized according to customers' requirements.

Disposable Intranasal Atomization Device

Initiative

The first Chinese company to invent this device.

Patent No.
CN201820609059.4
CN202020350634.0
CN202010194009.6

Rapid Absorption

Non-invasive & Painless

Self-Destruct Device

Inoculate Precisely

Special Dose Limiter

Product Presentation

- The device provides a painless and rapid absorption medication delivery option for non-invasive intranasal medication delivery. It improves safety for both caregivers and patients by avoiding needle-sticking injuries.
- It is an atomizing device for drug administration intended to convert liquid preparations into atomized particles and spray on the surface of human body tissues (or organs) for full contact to maximize the administration effect. Meanwhile, the reasonable and effective self-destructive structure ensures that the product can only be used once to provide users with safe and hygienic products.

Main Components

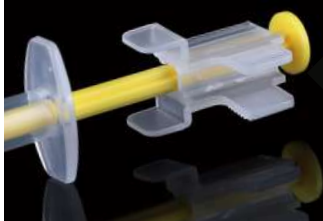

Product Parameters

Cat.No.	Specifications	Product Description	Qty/Pack	Qty/Case
201002	1 mL	Disposable Intranasal Atomization Device, White, with Plastic Needle, Syringe, Nasal Spray Device, Dose Limiter, Individually Packed,	1	1000
201112	1 mL	Disposable Intranasal Atomization Device, Yellow, with Plastic Needle, Syringe, Nasal Spray Device, Dose Limiter, Individually Packed,	1	1000

Inoculate Precisely

Using the dose limiter, inoculation becomes more precise.

<p>Step 1</p> 	<p>Eliminate Air Calibrate Dose to 0.2 ml</p> <p>Mount the dose limiter on push rod just like the picture on the left shows, then press the push rod until the top of dose limiter meets the bottom of tube like picture on the right shows. This step will eliminate the air and calibrate dose to 0.2 ml automatically.</p>		 <p>https://www.youtube.com/watch?v=H5tnqmnhGGA</p> <p>Watch operation video</p>
<p>Step 2</p> 	<p>Injection of First Dose Precisely</p> <p>Turn dose limiter 90° to the position like the picture shows. Gently aim the top of the spray nozzle on one nasal cavity of the patient and quickly press the push rod until the top of the dose limiter meets the bottom of tube. The 0.1 ml dose injection was completed precisely.</p>	<p>Step 3</p> 	<p>Injection of Second Dose Precisely.</p> <p>After finishing step 2, please remove the dose limiter, gently aim the top of the spray nozzle in the other nasal cavity of the patient and quickly press the push rod until reaching the bottom.</p>

Successful Cases

—Lyophilized Live Attenuated Influenza Vaccine, Vaccination by Nasal Mucosa

Advantage: Comprehensive Immunity

Mucosal Immunity & Humoral Immunity & Cellular Immunity

When influenza virus attacks the human body, it widely exists in the nasal cavity, respiratory tract and other mucosal sites, as well as in body fluids and cells. Lyophilized live attenuated influenza vaccine which is vaccinated by nasal mucosa can quickly stimulate the triple immune response of the human body and carry out defense against different parts of the virus:

- ▲ Vaccination by nasal mucosa which can form the first immune line in nasal cavity, produce mucous membrane immunity (IgA antibody).
- ▲ Arousing **humoral immunity** (IgG antibodies) to clear influenza viruses from body fluids.
- ▲ Arousing **cellular immunity** (T cells) to clear influenza viruses from cells.

When influenza virus attacks the human body, it widely exists in the nasal cavity, respiratory tract and other mucosal sites, as well as in body fluids and cells.

Nasal Mucosa

Body Fluids

Cells

Pre Potting Disposable Intranasal Atomization Device Coming soon. . .

CO₂ Orbital Shaker

Features

- Orbital shaking through magnetic power eliminates the need to replace belts;
- Small footprint ideal for use in a CO₂ incubator;
- Specially treated mechanical components protect up to 20% CO₂ and 95% humidity conditions;
- Convenient external control box with LED display allows for easy adjustments without opening the chamber door;
- Minimal heat dissipation assures conditions within the CO₂ chamber are not effected;
- CO₂ resistant shaker can be used outside of CO₂ incubator for maximum value.

7° Digital Nutating Mixer

Features

- The adjustable and gentle motion is ideal for many staining applications;
- Includes a large platform and non-slip mat;
- Low voltage power supply provides safe cold room operation and low energy consumption;
- Continuous or timed operation with automatic switch-off;
- Continue to run by last set speed and the remaining time when the power recovers;
- Audible and visual alarm: In timed mode, alarm will sound 5 times and then the time window shows "End" and flicker 5 times when the time reaches zero.

Cat. No.	105005
Speed	2~80rpm
Speed Accuracy	1rpm
Tilt Angle	7°
Timer	0~99h59min
Platform Dimensions	307x297mm
Max. Load	0.8kg
Display	LED
Included Accessory Standard in Packaging	6 Rubber Strips
Ambient Temperature	5~40 C
Relative Humidity	≤80%
Power Supply	AC100~240V, 50 / 60Hz
Max. Power	6.5W
Dimensions	440(L)x296(W)x189(H)mm
Net Weight	7.3kg
Protection Level	IP21

Rubber Strip

Mini Vortex Mixer

Features

- Extremely compact and easy operate;
- Powerful vortex for tubes up to 30mm;
- Head is made of durable material to ensure long life;
- Refined steel base is designed to ensure product stability.

Cat. No.	105003
Oscillation Mode	Circumference Oscillation
Orbital Diameter	Φ4.5mm
Max. Capacity	80mL
Max. Tube Diameter	Φ30mm
Speed	3000rpm
IP rating (DIN EN 60529)	IP40
Ambient Temp.	5~40 C
Outside Dimensions	Φ96xH85mm
Power	5W
Power Supply	AC100~240V,50/60Hz
Weight	0.55kg

Variable Speed Tube Revolver with Digital Display

Rotisserie Paddles
For 10mL / 15mL Tubes

Rotisserie Paddles
For 1.5mL / 2mL Tubes

Rotisserie Paddles
For 5mL / 7mL Tubes

Rotisserie Paddles
For 0.5mL / 0.8mL Tubes

Features

- Small footprint, "Plug and Play" operation;
- Includes five different interchangeable rotisseries;
- Rotation direction can be changed by slightly touching the rotisseries;
- Paddle angle is adjustable for different mixing purposes;
- High quality, maintenance-free motor with quiet operation.

Rotisserie Paddles
For 50mL Tubes

Cat. No.	105004
Rotation Speed	10~40rpm
Capacity	84x0.5mL tubes, 60x1.5mL / 2.0mL tubes, 28x5mL / 7mL tubes, 24x10mL tubes, 6x50mL tubes
Holder for Tubes Standard Configuration	Rotisserie Paddles for 10mL / 15mL Tubes 2pcs Rotisserie Paddles for 5mL / 7mL Tubes 2pcs Rotisserie Paddles for 1.5mL / 2mL Tubes 2pcs Rotisserie Paddles for 0.5mL / 0.8mL Tubes 2pcs Rotisserie Paddles for 50mL Tubes 1pcs
